

PRODUCT INFORMATION

The dependability of the Diamond<sup>®</sup> retaining wall system has made it the preferred choice of contractors for decades. With an improved, distressed face style, the Diamond<sup>®</sup> 10D retaining wall has the dependability of the original Diamond product, but in a lighter weight, so it's even easier to use.

The rear-lip block provides uniform installation and reduces labor costs. The system is completed with a complementary cap unit.

- Build gravity walls up to 3 feet 6 inches high, including buried course, but excluding the cap\*
- Taller walls can be built using geosynthetic reinforcement or the Anchorplex<sup>™</sup> retaining wall system when designed by a qualified engineer
- Minimum outside radius, measured on the top course to the front of the units: 3 feet
- Minimum inside radius, measured on the base course to the front of the units: 6 feet

*\*This height assumes cores are filled with drainage aggregate, level backfill and clean, compacted sand or gravel and no surcharge.*

**No pins. No mortar. No misalignments.**  
Rear-lip block, invented by Anchor,  
makes installation fast and accurate.  
Anchor - the original rear-lip product!

# Diamond® 10D

## RETAINING WALL SYSTEM

### PRODUCT INFORMATION
